

The most accurate and reliable source of air quality data

Airly is changing how people, businesses and governments see the air we all breathe by providing accurate, hyper-local data about air pollution. Knowledge and awareness are the first steps towards making real change.

Airly Data Platform enterprise tools allows users to:

- Browse real-time and hyperlocal air quality data
- Discover insights on sources of pollution
- Prepare and generate reports
- Download predefined and custom charts
- Get notifications when air quality rises above dangerous levels
- Take data-driven action using historical, current and forecasted figures
- Check a user's impact on their community thanks to the Social Impact Tracker
- Track the progress and impact of initiatives on air quality
- See the full picture with measurements from public and private air quality stations
- Contextualise this analysis by tracking weather conditions and traffic

The Airly Data Platform is:

- **Global** | data from around the world
- **Flexible** | multiple types of AQ data are searchable
- **Forecast** | AI driven, accurate air quality forecast for 24h with 95% accuracy
- **Accurate** | verified and constantly calibrated data
- **Personalized** | ready to be customized by every user
- **Responsive** | available on desktop and mobile
- **Influential** | sharable with the community
- **Connected** | integrated with sensor network, mobile app, email, social media

Airly Data Platform

is a constantly improving tool that allows users to make data-driven decisions, begin initiatives and monitor their effectiveness, and make fundamental behavioural changes to reduce pollution, limit its exposure and improve the health of citizens worldwide.

Our platform features:

**Real Time
Dashboard**

**Forecast
& Calibration**

**Social Impact
Tracker**

**Air Quality
Insights**

**Airly Map
- Web App**

**Air Pollution
Alerts**

**Report
Generator**

**Sensor
Manager**
